

The Twilmij logo is displayed in green, block letters on top of a dark wooden clock tower. The tower has two clock faces on its sides. The background is a gradient from orange to green.

TWM ASM Mix

TWM ASM Mix improved: now also comes with preventive dosing

Since 2009, Twilmij has incorporated TWM ASM Mix in its range of supplementary premixes.

TWM ASM Mix combats an excessive immune response and promotes a desirable reaction. This makes the product successful in reducing the incidence of meningitis in piglets resulting from *Streptococcus Suis* (type 9). The recommended dosage of TWM ASM-Mix is 2 kg/tonne of the final feed in pre-start, weaning and rearing feeds destined for problem farms with a higher incidence of streptococci. TWM ASM Mix is based on refined yeast products and vitamin C.

In partnership with the University of Gent, Twilmij has carried out research on the effect of a number of refined yeast products in moderating the immune response. 1,3-1,6- β -D-glucans, refined from pure brewer's yeast, have been found capable of suppressing inflammatory responses. In addition, yeast extract provides important building blocks (including nucleotides) for tissues with a high turnover and the specific immune system. With this knowledge, Twilmij has improved TWM ASM Mix so that the immune system can be regulated with even greater precision. Furthermore, practical research indicates that the improved TWM ASM Mix is already working at lower dosages.

Dosage:

The new (preventive) recommended dose has therefore changed to 1 kg per tonne for farms with a low infection incidence and 2 kg per tonne for farms with structural problems.

Packaging:

TWM ASM Mix is supplied in 25 kg bags.

Shelf life:

In sealed packaging, TWM ASM Mix has a shelf life of 6 months from the production date if stored in a cool, dry place.

Code:

03S0214
